INTRODUCTION AND ACKNOWLEDGEMENTS

The purpose of this publication, which is published on a quarterly basis, is to present statistical information of a socio-economic nature in order to meet the needs of a wide variety of governmental and private users.

A computerized system is responsible for producing the photo-ready copy of the Review. The information in this publication is derived from three principle sources – Statistics Canada, the Manitoba Bureau of Statistics, and various other provincial government departments and agencies. The assistance of all contributors to the Review is gratefully acknowledged.

Users seeking further technical information concerning coverage, reliability, methodology, etc., are advised to consult the original source, found at the bottom of each table. Users with suggestions for improvement or comments, please contact the Manitoba Bureau of Statistics at (204) 945 – 2985 or write the address below.

SUBSCRIPTION RATES

Four issues per annum	$ 55.00
Also available on diskette:

GENERAL PRINCIPLES FOR THE MANITOBA STATISTICAL REVIEW

The following are the general principles under which this publication operates.

1. General Statistics Only

   Only statistics of general public interest are included in the Review. Specific sectoral statistics should be found in various Manitoba departmental or Statistics Canada publications. The appearance of data in the Review does not necessarily reflect acceptance of the data by the Manitoba Bureau of Statistics. On request, the Bureau will provide a statement regarding the reliability of data appearing in the Review.

2. Comprehensive and Timely

   The Review contains sections on demographic and labour force data; economic and price statistics, financial and taxation statistics; sectoral statistics (agriculture, forestry, fishing and trapping, manufacturing, mineral, energy, construction and housing, and retail trade); social statistics (health and hospital, education, corrections, and welfare); and governmental statistics. It is published three months after the end of the quarter for which data is available.

3. Special papers on Current Economic and Statistical Issues

   The Manitoba Statistical Review contains special papers each quarter dealing with current economic issues or statistical developments. The papers are general in nature and are written for layperson comprehension. The views expressed by the author(s) of the special articles published in the Manitoba Statistical Review are their own and do not necessarily reflect those of the Department of Industry, Trade and Tourism, or the Government of Manitoba.

4. Manitoba Bureau of Statistics Data Integrated into the Review

   The Manitoba Bureau of Statistics current surveys have been integrated into the Review, e.g., prices survey of food. In addition, Tables 19, 20 and 21 provide summary information on the provincial economy from the Manitoba Provincial Economic Accounts.

SPECIAL SECTION

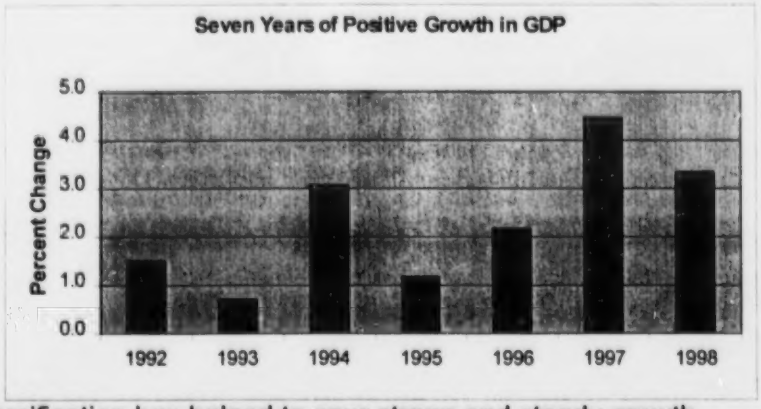
Continuing Diversification: An Industrial Overview of the Manitoba Economy 1973 – 1998

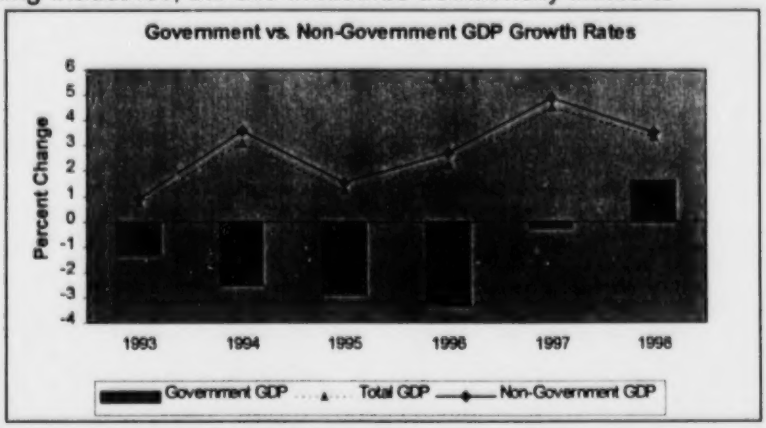
Highlights

- The Manitoba economy has posted **seven years of positive growth**. **Diversification** has been an important part of this stable economic performance.
- The **non-government sector** has been particularly strong, expanding at a higher rate than the total economy in every year from 1992 to 1998.
- The **manufacturing industry** has been the engine of growth in the 1990's contributing 25.4% of total GDP growth.
- Strong sectors of growth within manufacturing include **transportation equipment, machinery and food processing**.
- The **business services** industry has become increasingly important in the Manitoba economy in recent years contributing 10.0% of total GDP growth from 1992 to 1998.
- Falling prices have helped strengthen growth in the **communications industry**, which was the second strongest contributor to GDP growth behind manufacturing in the period 1992 to 1998.
- Historically, the **agriculture and mining** industries combined to form 15.4% of total GDP in 1973. These two industries comprised only 5.3% of total GDP in 1998.
- The Manitoba economy has become **more service-oriented** over the last twenty-five years. In 1973, 43.2% of total GDP was attributed to other services. In 1998, this had expanded to 51.0%.

Diversification leads to stable growth

The Manitoba economy has been rapidly diversifying over the last several decades. In the past, two of the province's main industries were agriculture and mining. In 1973, 15.4% of total GDP output came directly from these two industries. However by 1998, these two industries comprised only 5.3% of the total economy (see last section for historical trends). This decline in share has been caused by the rapid growth of many other industries. This diversification has helped to spur strong and steady growth in the past few years. As a result, the economy has now experienced seven years of positive growth, the last two years (1997 and 1998) being particularly robust. This steady growth has occurred despite large fluctuations in the output of the agriculture and mining industries, the two industries traditionally linked to the Manitoba economy. Remarkably, it also occurred during a time when both the federal and provincial governments were in the process of balancing their budgets. Non-government GDP at factor cost has grown by 18.3% (in constant 1992 dollars, please see user note) since 1992, considerably above the 15.8% growth when government is included. In fact, non-government GDP grew more quickly than total GDP in every year throughout the 1992 to 1998 time period.





User Note:

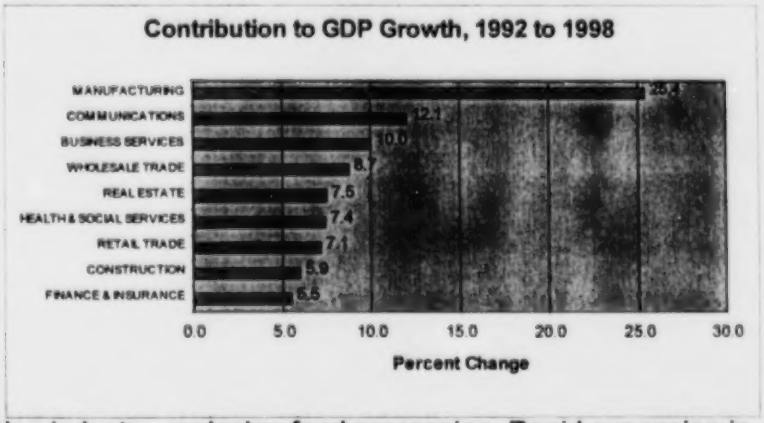
This article uses GDP at factor cost as opposed to GDP at market prices. The difference between these two measures is that GDP at factor cost excludes indirect taxes, subsidies and statistical discrepancy. All numbers and percentages in this article are in constant 1992 dollars unless otherwise stated.

This report is the first time that MBS has published GDP at factor cost in constant dollars as opposed to current dollars. The constant dollar or real GDP measure holds all prices at a 1992 dollar value so that the volume of production can be analyzed.

Manufacturing the key to stable growth

The manufacturing industry has been the chief reason for the steady, strong growth. Its output has increased by 36.5% over the 1992 to 1998 time period, well above the increase of total real GDP at factor cost, which increased 15.8%. An impressive 25.4% of the total GDP growth in Manitoba since 1992 can be attributed to manufacturing. From 1992 to 1998, manufacturing has added 14,000 direct jobs to the Manitoba economy accounting for 29% of the total jobs added to the economy over this time period. The manufacturing industry's rise has been lead by exports, which have increased 83% over the 1992 to 1998 time period, well above the growth rate of 54% for total exports. A low Canadian dollar relative to the United States dollar as well as a strong U.S. economy have been important contributing factors to these notable gains.

Several sectors within manufacturing have experienced especially strong growth in the 1990's, illustrating both the diversification within the economy and in manufacturing. For example, output of the transportation equipment manufacturing sector has increased $263 million since 1992, $101 million of that occurring in 1998. This strong growth has made it the largest sector within the manufacturing industry, replacing food processing. Rapid expansion in bus and air transportation equipment manufacturing has been the chief factors for the strong growth within the transportation equipment sector.



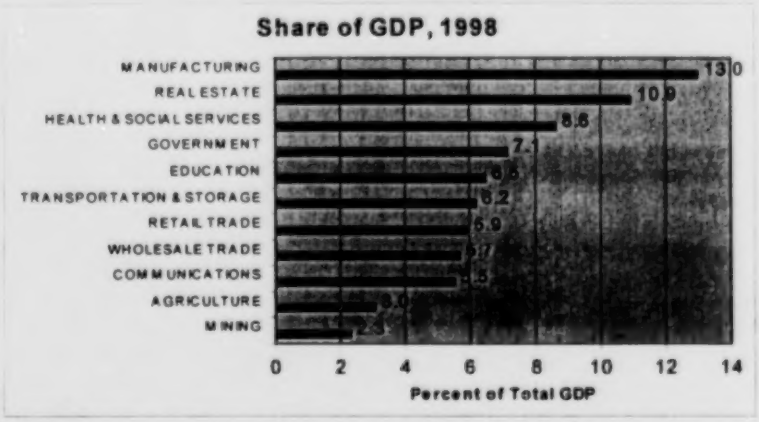
Machinery manufacturing has also been a strong contributor. This industry's GDP has increased $239 million since 1992. This 250% increase occurred despite a $20 million drop in GDP in 1998. A major cause for the slowdown in 1998 was the reduced production of farm implements.

Despite being replaced as the top producing industry within manufacturing, the food processing industry has also experienced solid growth in the past years. From 1992 to 1998 it grew $113 million, a 31.0% increase. This industry will receive a boost in 1999 with the opening of a new hog processing plant in Brandon.

Other sectors have also faired well within manufacturing over the 1992 to 1998 time period. They include chemical manufacturing (which grew 68.3% over this period), wood and wood products (63.4%), furniture (58.4%), paper products

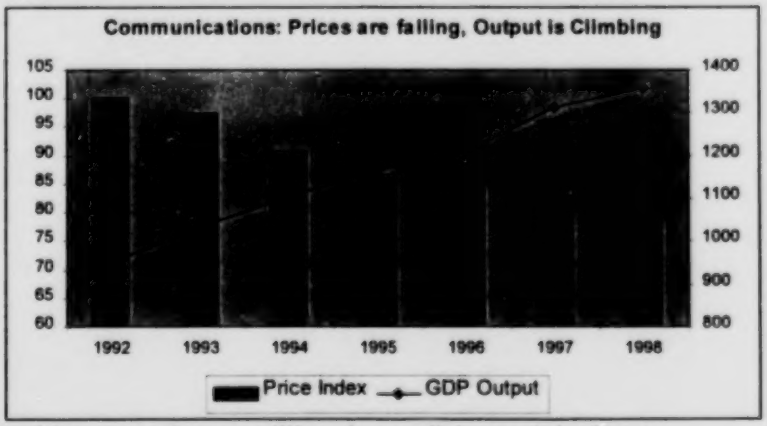
(45.9%), primary metal (31.1%) and plastic products (30.4%). This diverse growth has allowed the manufacturing industry to record gains no lower than 2.6% and up to 11.0% over the seven year time period from 1992 to 1998 providing a large, stable source of growth for the Manitoba economy.

With its strong showing in recent years, manufacturing is the largest industry in Manitoba's economy, comprising 13.0% of the total economy. It may be surprising to observe that the real estate industry is the second largest industry in the province. However, it is should be noted that this industry, as standard to economic accounting procedure, includes the imputed rent paid by home owners to themselves as part of their economic well being.



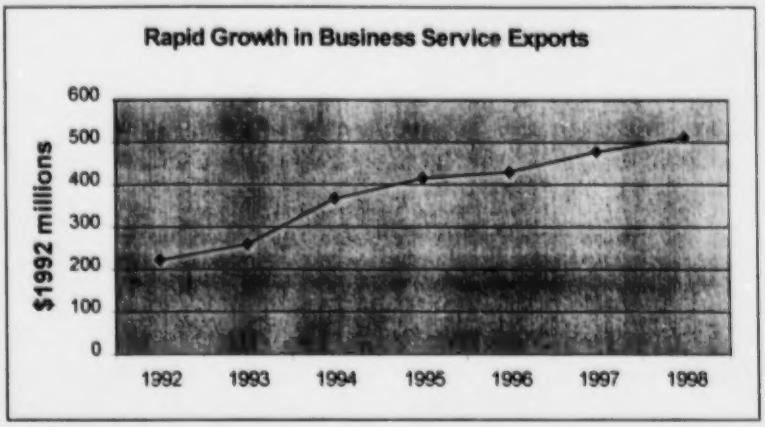
Communications experiences falling prices but rising output

The communications industry has been the second largest contributor to growth in the Manitoba economy during the 1992 to 1998 time period, providing 12.1% of the total growth in GDP. Its output expanded by 42.5% in constant dollars over this time period. This industry has seen large price decreases. Since 1992, prices have dropped 21.8% as a result of new technology and increased competition. Long distance telephone services, Internet services and call centers have been the major sources of growth in this industry. The communications industry has accomplished this rapid growth in GDP output without increasing employment. In fact, both labour income and employment have decreased slightly since 1992. Interprovincial exports have been an important aspect through which the communications industry has grown. These exports have increased 33.9% since 1992.



Business services: an "up and coming" industry

The business services industry has been the third largest contributor to Manitoba's GDP over the 1992 to 1998 time period increasing $334 million or 10.0% of the total increase in GDP. The sector producing the largest increases in this industry was computer services. This sector has produced strong increases in output throughout the 1990's and therefore its growth is not just the result of the Y2K problem. Unlike the communications industry however, the growth in the business services industry has resulted in large increases in employment adding 12,000 direct jobs to the Manitoba economy since 1992. This industry has gained impressive growth through trade, both internationally and interprovincially. International exports have increased $161 million or 262.6% since 1992; interprovincial exports have increased $125 million or 200.0% since 1992.



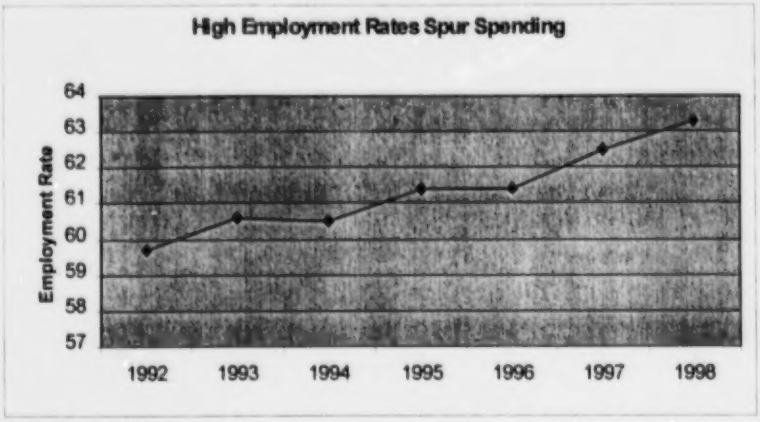
Wholesale trade: a strong contributor to the economy

The fourth largest contributor to GDP over this time period was wholesale trade, which grew by $294 million or 26.9%. This accounted for 8.7% of the total growth in output. The wholesale industry has benefited from the recent blurring of the retail and wholesale trade industries. This was particularly the case for trade in electronic equipment and computers. Much of the "retail" type trade in computers is classified under wholesale trade. Exports of wholesale goods have also added to the output totals of this industry. Total exports (both international and interprovincial) increased $556 million since 1992, a gain of 76.1%. Wholesale trade exports are closely tied to exports of other goods. Manitoba's high volume of exports over the past few years has therefore helped to boost the output of this industry. Wholesale trade has added 4,700 jobs to the Manitoba economy since 1992.

Retail trade boosted by strong consumer confidence

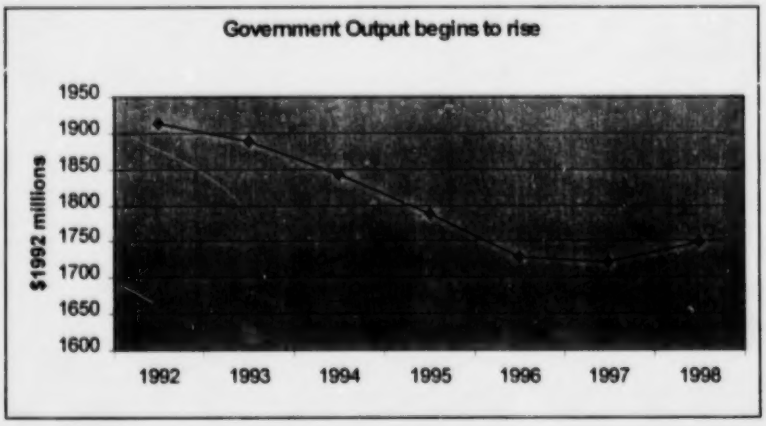
The retail trade industry has been another important source of growth in the Manitoba economy especially in the last two years. In 1997, the output of the retail trade industry expanded 5.0%. A 21.8% increase in vehicle sales was the chief catalyst for this performance. In 1998, the industry expanded a further 4.5% despite a 0.2% decrease in vehicle sales. The main reasons for the strong growth in 1998 was the sale of other durable goods such as household furnishings and appliances, corresponding with a surge in residential

construction. This industry has benefited from rising levels of consumer confidence in recent years, which in turn has resulted from high levels of employment in the province. Over the 1992 to 1998 time period, this industry has contributed 7.1% of the growth in total GDP.



Government ends trend in 1998

The Manitoba economy has managed strong growth in the 1992 to 1998 period despite a reduction in output in the government administration sector (health and education not included). The combined levels of government (federal, provincial and local) reduced their GDP by 8.6% over this time period. The largest decrease came at the federal government level, which saw its GDP drop by $137 million or 14.7%. Federal government employment decreased by 1,600. Provincial government GDP dropped 11.3% over this same time period combined with a reduction of 1,800 employees. Local government administration actually increased its GDP by 10.2% despite decreasing its employment level by 1,300 from 1992 to 1998. All three levels of government posted positive growth in 1998 signaling a possible end to the trend of the 1990's.



Falling Prices of Primary Goods Result in Deflation

The Manitoba economy has experienced two consecutive years where the overall GDP deflator was negative, falling 0.8% in 1997 and a further 0.3% in 1998. The main reason for these declines was the falling price of primary goods such as wheat, hogs and metals (i.e. nickel and zinc). The price index for the

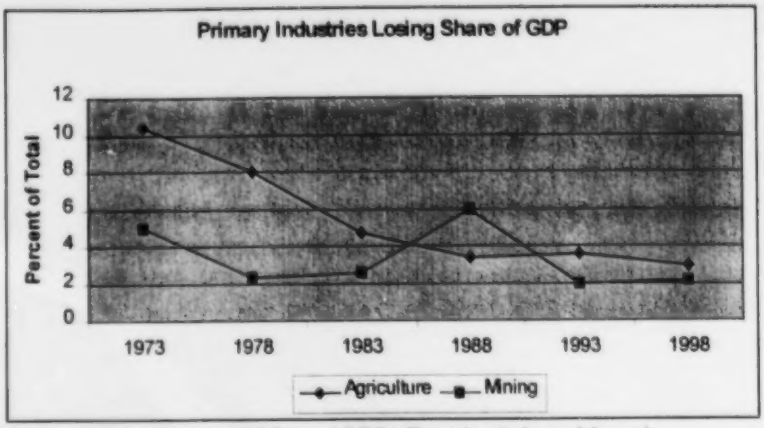
agriculture industry has dropped 31.7% in the last two years while the index for the mining industry fell 22.0% over the last three years. Since many of these primary goods are inputs into other goods producing industries like manufacturing, prices have also been falling in these industries. Prices in the services industries have not experienced this same decline. However, inflation has been contained to low rates even in services. An exception amongst the service industries is communications, as mentioned above. This industry has experienced large price decreases due to new technology and increased competition. Business services have also seen several years of negative prices, resulting from advances in computer technology.

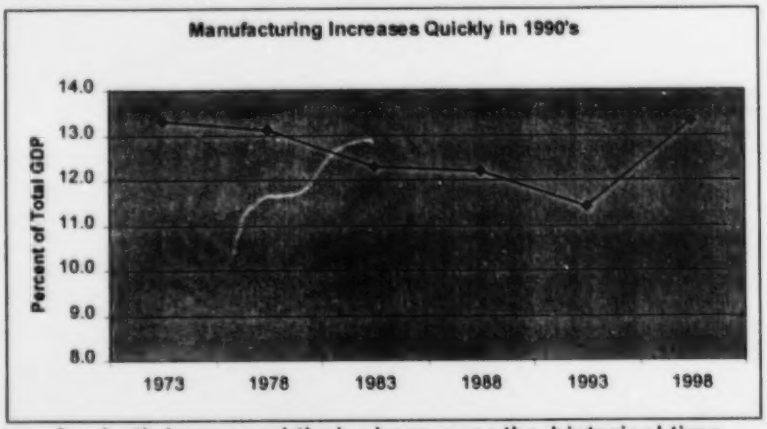
Historical Trends: A Movement Away from a Resource Based Economy

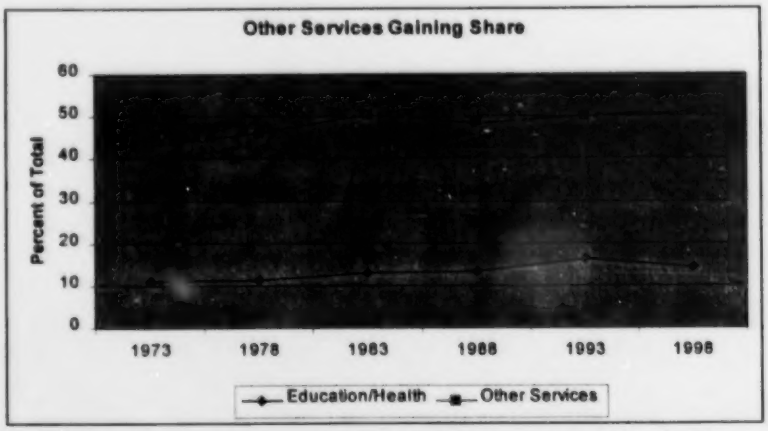
The goods producing industries in Manitoba, which include the agriculture and mining industries, provided 39.4% of total GDP output in 1973 (This section uses current dollar prices since historical data is not available on a constant dollar basis). In 1998, this had dropped to 27.4%. This marked decrease indicates the movement of the economy from resource based to more service based. The rapidly expanding communications and business services industries mentioned earlier are prime examples of this diversification. It should be noted that the allocation of the economy between goods and services producing industries is somewhat affected by the economic climate. Generally during good economic times, a greater share of the Manitoba economy can be attributed to the goods producing industries. In 1983, shortly after a recession, 71.0% of GDP output was created by the service industries. This share fell to 68.6 in 1988, a time when the economy was stronger. In 1993, as the economy was once again just recovery from recession, services produced 73.5% of GDP output. This fell again slightly by 1998 with the economy growing strongly. The small decrease in share in 1998 is interesting since it indicates that an increasing part of the growth in the economy is the result of services.

As mentioned earlier, the agriculture and mining sector have seen large decreases in their share of total GDP. Agriculture experienced the largest drop, from 10.4% of total GDP in 1973 to 2.9% in 1998. Mining's share of GDP has

also been cut by more than half falling from 5.0% of total GDP in 1973 to 2.1% in 1998. Manufacturing's share has remained relatively stable over the historical time period. However, it has experienced a marked increase from 1993 to 1998. Provincial and local governments have increased their share slightly however unlike manufacturing, their share has dropped from 1993 to 1998. The education and health and social services industries, which are mainly funded by governments, have also both increased their share over the historical time period. However, like the government industries, they too have dropped in GDP share from 1993 to 1998. Other services, which includes business services, communications and retail and wholesale trade, has seen the largest increase in share, from 43.2% in 1973 to 51.0% in 1998.







For further information please contact Conrad Barber-Dueck at the Manitoba Bureau of Statistics, 945 – 2652. Cbarberdueck@mbs.gov.mb.ca.

NOTE: 1. IN JANUARY OF 1999 STATISTICS CANADA INTRODUCED A NEW SYSTEM FOR CLASSIFYING LABOUR FORCE SURVEY DATA BY INDUSTRY CALLED THE NORTH AMERICAN INDUSTRY CLASSIFICATIONS SYSTEM (NAICS). HISTORICAL DATA BY INDUSTRY BACK TO JANUARY 1987 WAS REVISED ON THE BASIS OF THE NEW CLASSIFICATION SYSTEM. THIS TABLE WAS AFFECTED BY THIS CHANGE AND CONTAINS THE REVISED DATA.
2. ESTIMATES PRESENTED MAY HAVE VARYING DEGREES OF RELIABILITY. FOR FURTHER INFORMATION THE USER IS ADVISED TO CONSULT THE ORIGINAL DATA SOURCE.

DATA SOURCE: STATISTICS CANADA CATALOGUE NO. 71-001.

NOTE: DATA FOR THE MOST RECENT FOUR MONTHS IS ALWAYS PRELIMINARY AND SUBJECT TO REVISION. BASED ON THE 1980 STANDARD INDUSTRIAL CLASSIFICATION. ESTIMATES FOR THE FOLLOWING INDUSTRY GROUPS ARE INCLUDED IN THE TOTAL: BEVERAGE INDUSTRIES, TOBACCO PRODUCTS, RUBBER PRODUCTS, PLASTIC PRODUCTS, LEATHER AND ALLIED PRODUCTS, PETROLEUM AND COAL PRODUCTS, TRANSPORTATION EQUIPMENT, AND ELECTRICAL AND ELECTRONIC PRODUCTS.

DATA SOURCE: STATISTICS CANADA CATALOGUE NO. 31-001.

TABLE 44 PRINCIPAL MANUFACTURING STATISTICS, MANITOBA
